this book provides a comprehensive summary of the latest academic research on the important topic of too big to fail (tbt) in banking it explains tbt from various perspectives including the range of regulatory measures proposed to counter tbt most notably the globally accepted regulation of global systemically important banks (gsibs) and its main tool of capital surcharges the empirical analysis quantifies the shareholder value of the gsib attribution by using quarterly observations from more than 750 global banks between q2 2008 and q3 2015 the main finding is that gsibs are confronted with a substantial relative valuation discount compared to non gsibs from the end of 2011 until the end of 2015 a stable discount of 0.6x-0.8x price to tangible common equity (ptce) is statistically highly significant the results suggest that the gsib designation effect which positively impacts gsibs share prices because of funding benefits from igg is dominated by the regulatory gsib burden effect which negatively impacts gsibs share prices because of lower profitability due to

capital surcharges and other regulatory requirements placed on g sibs the findings re open the debate about whether breaking up g sibs would unlock shareholder value and whether g sibs are regulated efficiently
