Carole I. Crumley has brought together top scholars from across anthropology in a benchmark volume that displays the range of exciting new work on the complex relationship between humans and the environment continually pursuing anthropology's persistent claim that both the physical and the mental world matter. These environmental scholars proceed from the holistic assumption that the physical world and human societies are always inextricably linked as they incorporate diverse forms of knowledge. Their work reaches beyond anthropology to bridge the sciences, social sciences, and the humanities and to forge working relationships with non-academic communities and professionals. Theoretical issues such as the cultural dimensions of context, knowledge, and power are articulated alongside practical discussions of building partnerships, research methods, and ethics, and strategies for implementing policy. *New Directions in Environment and Anthropology* will be important for all scholars and non-academics interested in the relation between our species and its biotic and built environments. It is also designed for classroom use in and beyond anthropology, and students will be greatly assisted by suggested reading lists for their further exploration of general concepts and specific research. The last decade has seen a dramatic increase in the attention paid by social scientists to environmental issues and a gradual acknowledgement in the wider community of the role of social science in the public debate on sustainability. At the same time, the concept of culture, once the property of anthropologists, has gained wide currency among social scientists. The book shows how an understanding of culture can throw light on the way environmental issues are perceived and interpreted both by local communities and within the contemporary global arena. Taking an anthropological approach, the book examines the relationship between human culture and human ecology and considers how a cultural approach to the study of environmental issues differs from other established approaches in social science. This book adds significantly to our understanding of environmentalism as a contemporary phenomenon by demonstrating the distinctive contribution of social and cultural anthropology to the environmental debate.

*Environmental Anthropology: A Reader* is a collection of historically significant readings dating from early in the twentieth century up to the present. On the cross-cultural study of relations between people and their environment, it provides the historical perspective that is typically missing from recent work in environmental anthropology. It includes an extensive intellectual history and commentary by the volume's editors, offering a unique perspective on current interest in cross-cultural environmental relations. Divided into five thematic sections: 1. The Nature-Culture Divide, 2. Relationship between

environment and social organization 3 methodological debates and innovations 4 politics and practice and 5 epistemological issues of environmental anthropology organized into a series of paired papers which speak to each other designed to encourage readers to make connections that they might not customarily make
