the invention of the laser was one of the towering achievements of the twentieth century at the opening of the twenty first century we are witnessing the burgeoning of the myriad technical innovations to which that invention has led the handbook of laser technology and applications is a practical and long lasting reference source for scientists and engineers who work with lasers the handbook provides a comprehensive guide to the current status of lasers and laser systems it is accessible to science or engineering graduates needing no more than

standard undergraduate knowledge of optics whilst being a self contained reference work the handbook provides extensive references to contemporary work and is a basis for studying the professional journal literature on the subject it covers applications through detailed case studies and is therefore well suited to readers who wish to use it to solve specific problems of their own the first of the three volumes comprises an introduction to the basic scientific principles of lasers laser beams and non linear optics the second volume describes the mechanisms and operating characteristics of specific types of laser including crystalline solid state lasers semiconductor diode lasers fibre lasers gas lasers chemical lasers dye lasers and many others as well as detailing the optical and electronic components which tailor the laser s performance and beam delivery systems the third volume is devoted to case studies of applications in a wide range of subjects including materials processing optical measurement techniques medicine telecommunications data storage spectroscopy earth sciences and astronomy and plasma fusion research this vast compendium of knowledge on laser science and technology is the work of over 130 international experts many of whom are recognised as the world leaders in their respective fields whether the reader is engaged in the science technology industrial or medical applications of lasers or is researching the subject as a manager or investor in technical enterprises they cannot fail to be informed and enlightened by the wide range of information the handbook supplies

the complete guide to understanding and using lasers in material processing lasers are now an integral part of modern society providing extraordinary opportunities for innovation in an ever widening range of material processing and manufacturing applications the study of laser material processing is a core element of many materials and manufacturing courses at undergraduate and postgraduate level as a consequence there is now a vast amount of research on the theory and application of lasers to be absorbed by students industrial researchers practising engineers and production managers written by an acknowledged expert in the field with over twenty years experience in laser processing john ion distils cutting edge information and research into a single key text essential for anyone studying or working with lasers laser processing of engineering materials provides a clear explanation of the underlying principles including physics chemistry and materials science along with a framework of available laser processes and their distinguishing features and variables this book delivers the knowledge needed to understand and apply lasers to the processing of engineering materials and is highly recommended as a valuable guide to this revolutionary manufacturing technology the first single volume text that treats this core engineering subject in a systematic manner covers the principles practice and application of lasers in all contemporary industrial processes packed with examples materials data and analysis and modelling techniques

this book discusses the physics of plasma initiation and reviews the features of dissipating propagating plasmas it deals with advances in diagnostics for high energy laser fusion plasmas the book reviews the basic physical processes plasma characteristics of the continuous optical
